FAST GUIDE

Mipony is very simple but it has many options in its management. For your first contact with the program you can follow the instructions below.

1º Once you find files to download, copy the text containing the links (you can also copy the web addresses where download links are).

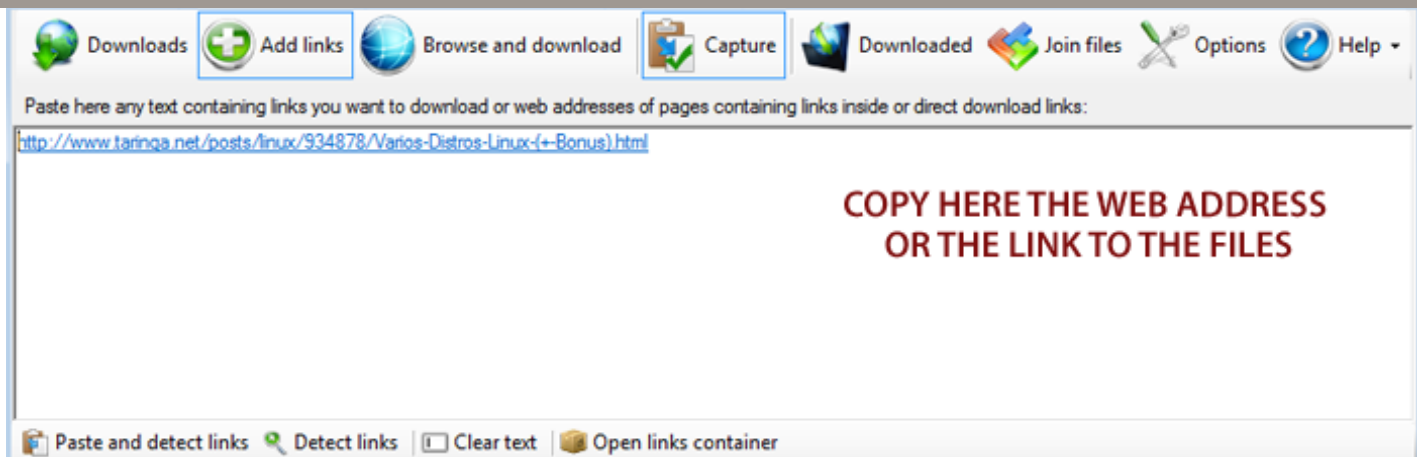

DOWNLOAD
LATEST
VERSION OF
MIPONY

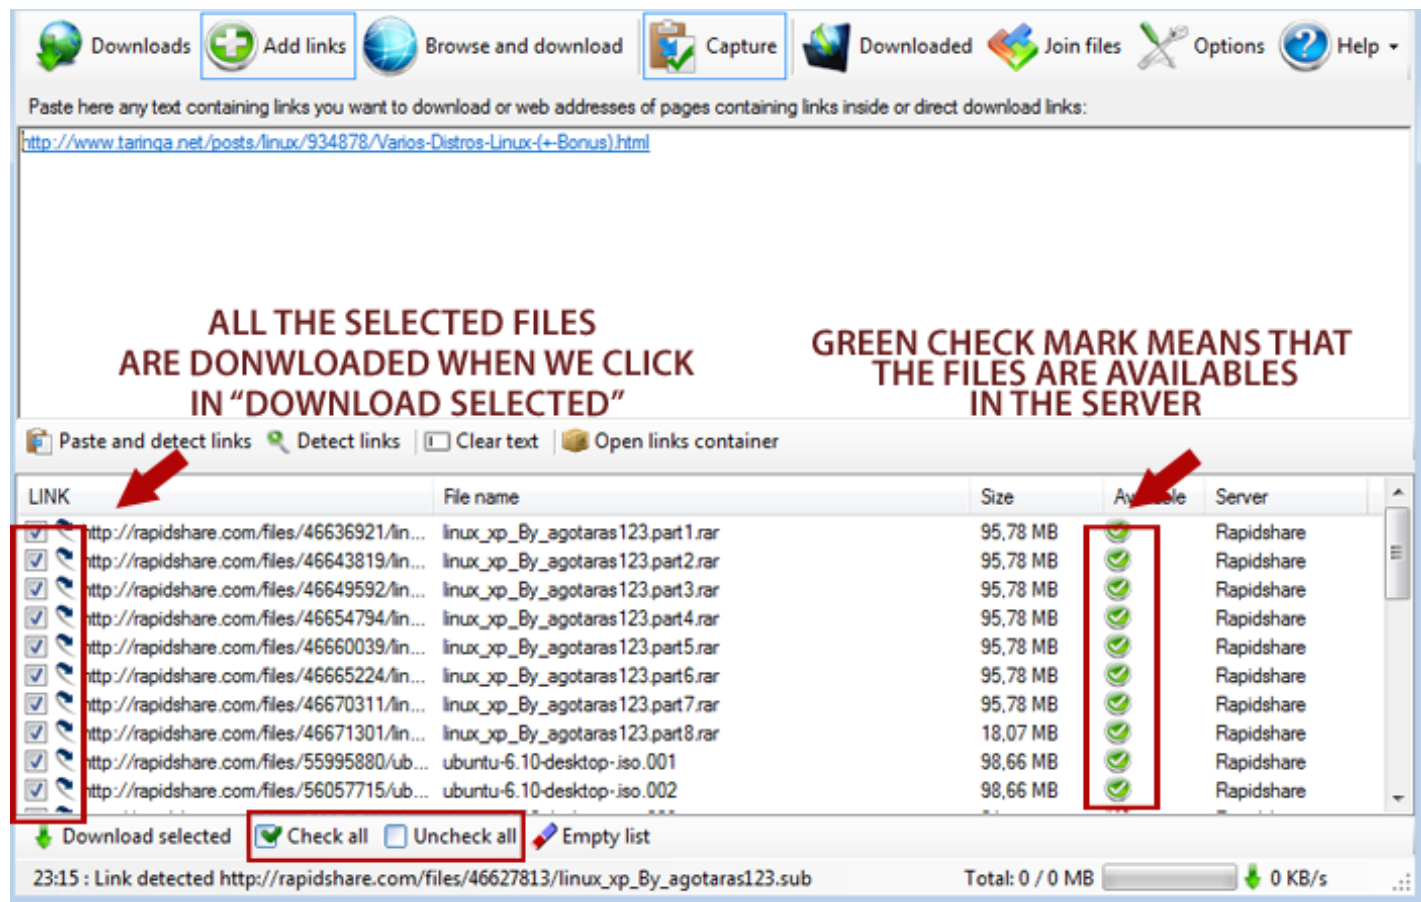

✧ Megaupload
✧ Rapidshare
✧ Hotfile
✧ Easy-share
✧ Gigasize
✧ Mediapfire
✧ Depositfiles
✧ Megaporn
✧ Filefactory
✧ Uploading
✧ 4shared
etc.

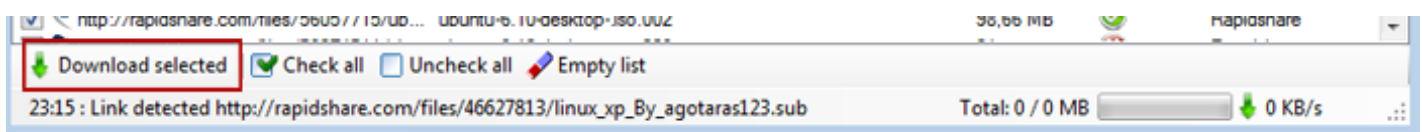

2nd Paste the text with the links in the window "Add links" and click "Paste and detect links". Pasting is not necessary if you have activated the option to "Capture". You can also paste the web address of the page where the links are located and Mipony will download it and find all the links to files.

In this step, the program detects and verifies that the links are available on the server, if so, Mipony shows a green mark for each file and it automatically marks them for download. If you don't want to download any of them, just uncheck them.

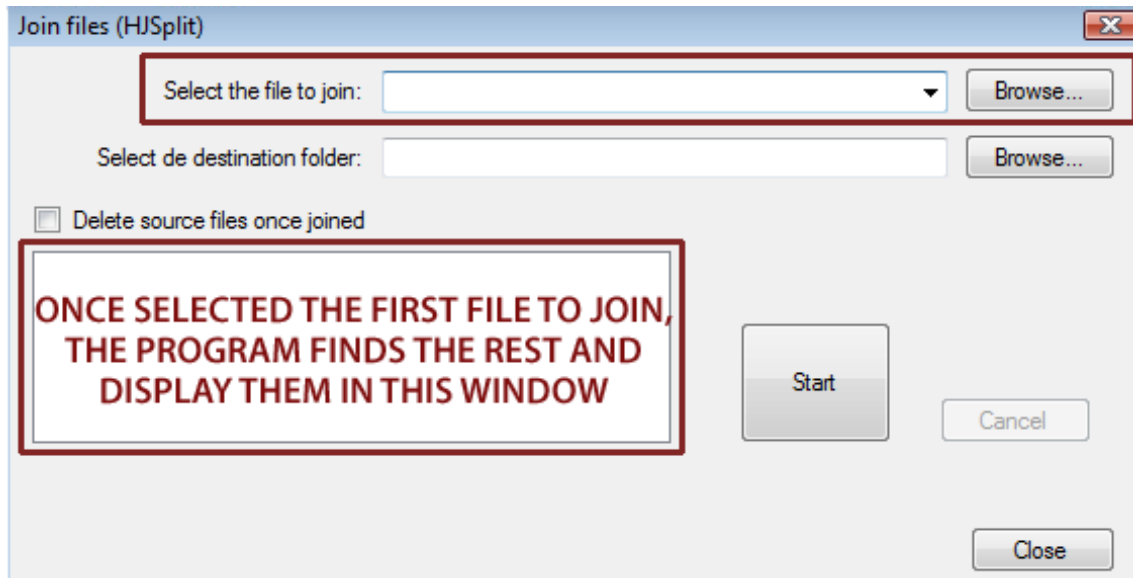

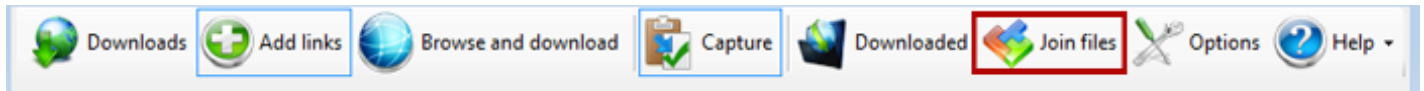

3ºNext, click "Download Selected".

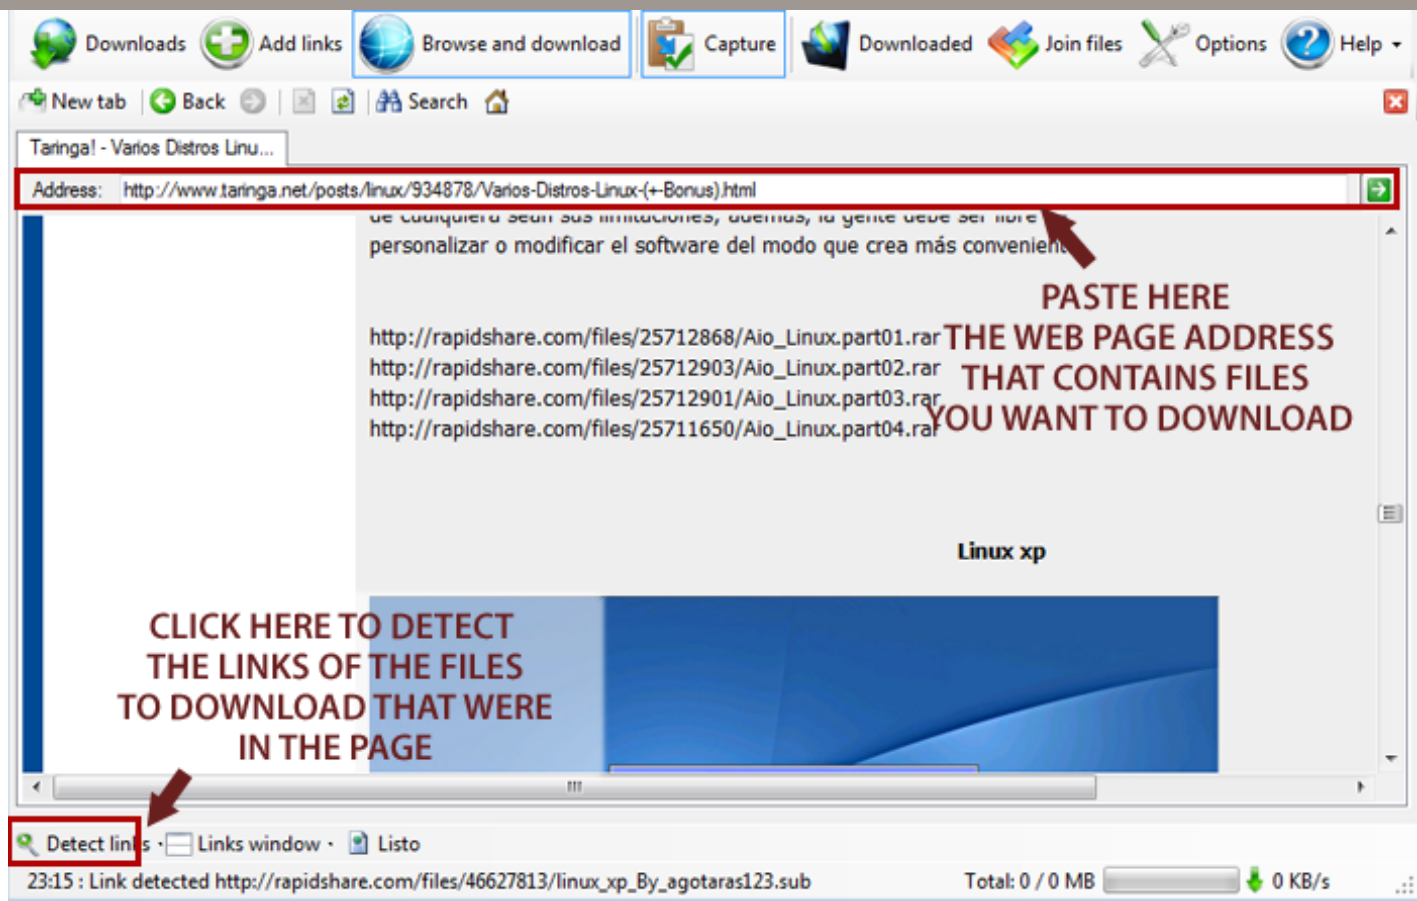

The files are added to the download list on the Download screen.

There are some files that are split into parts and must be joined once all are downloaded. You can join them with the button "Join files". It opens a window where you select the first file and where you want to save the result.

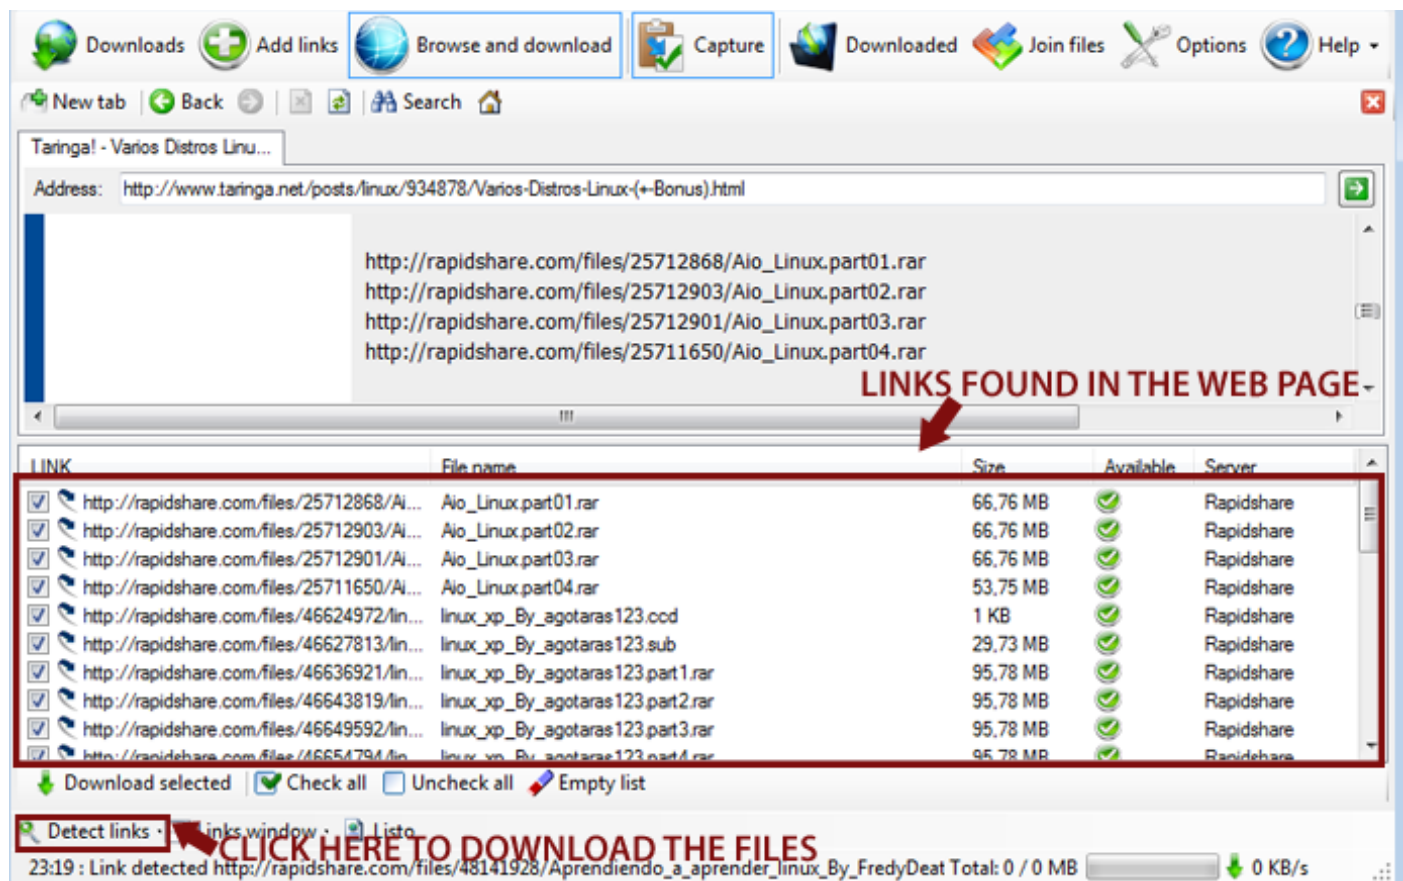

BROWSER

With "Browse and Download" screen you can browse the Internet or directly paste the URL of the website from which you want to download some files.

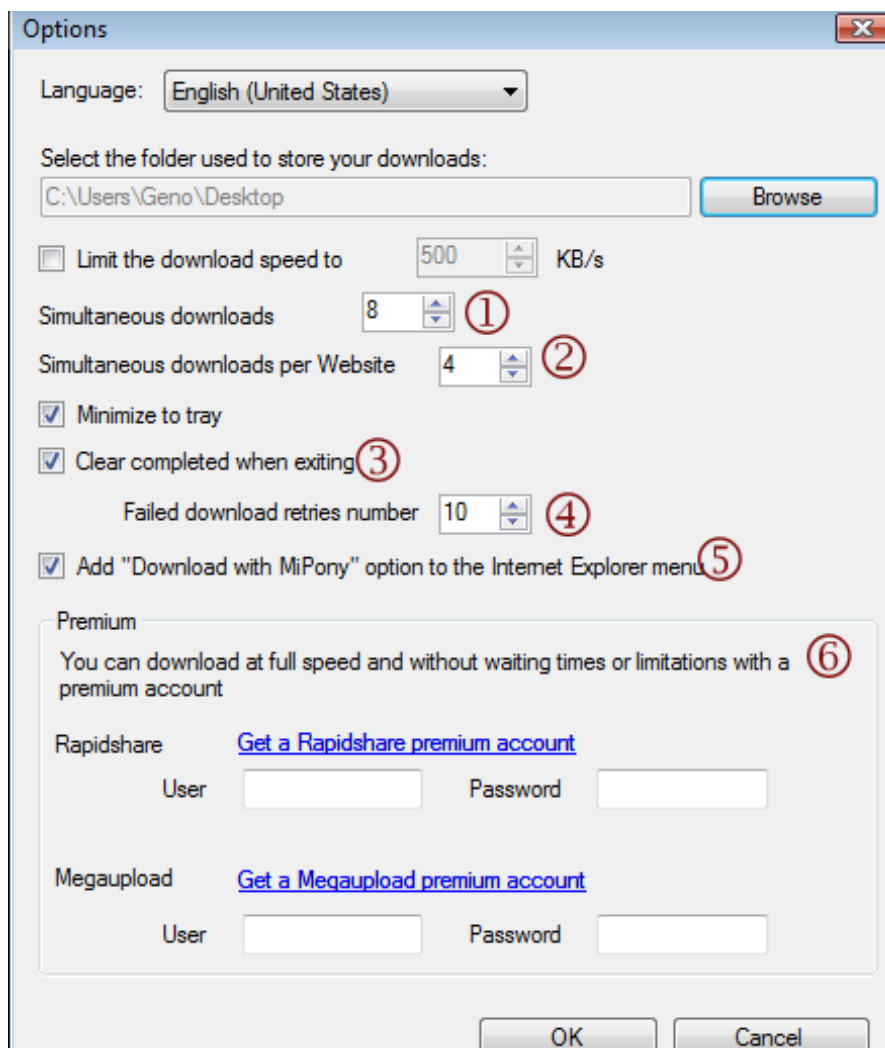

Then, you only have to click on "Detect links", the program searches for links to files and it displays the files found. So, you only have to select those you want to download and click on "Download Selected".

OPTIONS

From the Options screen you can adjust the program for your needs.

①-"Simultaneous downloads: you can establish how many simultaneous downloads in total the program can start. The rest of downloads will be queued.

②-"Simultaneous downloads per website": you can establish how many simultaneous downloads the program can start from each server, the rest of downloads will be queue. However, if there is no premium account, most servers limit the number of simultaneous downloads (usually to one) so here the maximum number can't be reached.

③-"Clear Completed when exiting": It removes from the list of downloads the files that have been completed when you close the program. If it isn't activated, when you reopen the program, the completed files will be listed. In the case of files where you saved a password with, although this option is marked, the program doesn't automatically remove them.

④-"Failed download retries number": if the download fails, the program will try again as many times as you indicate here.

⑤-Add "Download in MiPony" option to the Internet Explorer menu: function only for Internet Explorer. If you have this option activated, in Explorer context menu (right button) you will see "Download in MiPony". When you click on it, the website address or the right clicked link is copied and pasted in MiPony automatically.

⑥

-Premium: to get maximum speeds and avoid waiting times you can create a premium account from here, and if you already have an account, please fill your details to use it with the program.
